

“Share it!”

1. Any user can register and start sharing their files.
2. Immediately after registration the user should see the button "Upload file". After clicking on this button, the user should be redirected to the page with the file upload form.
3. The form is represented by one single field - `<input type="file">`. The uploaded file must be no more than 10Mb and must not have the .exe, .bmp or .php extensions.
4. After successful uploading of the file, the user should be given a unique short link to the file like "<http://domain.com/1bh0k2l>". He can share it with other users. When clicking on this link, application should show a page with information about the file (the original name and time of upload), as well as the ability to download it. Regardless of whether the user is authorized or not.
5. A registered user should be able to view the list of files uploaded by him, as well as the possibility to delete them. It should be available by clicking on the "My files" button. Application should also count the number of downloads of files.
